

IBM University Engagement Project Submission

“Exploring the Power of Agentic AI with IBM Cloud and Orchestrate”

Project Title – **[Fitness Buddy]**

Domain of Project – **[Healthcare and Workout]**

Student Name	Recent Passport Photo		Email ID	Mobile number [WhatsApp]
Yogesh Chauhan			yogeshchauhan1830@ gmail.com	9416141767

Problem Statement :

Problem Statement :Fitness Buddy

The Challenge :

Maintaining a healthy and active lifestyle has become increasingly difficult due to busy schedules, lack of motivation, inconsistent workout routines, and poor eating habits. Many individuals struggle with **exercise planning, workout consistency, nutrition management, progress tracking, and staying accountable**. Fitness information available online is often scattered, generic, and not personalized..

The Objective :

Build an **AI-powered Fitness Buddy** that acts as a personal fitness coach, nutrition guide, and health companion by delivering **personalized workout plans, diet recommendations, progress tracking, and motivational support**. The solution should:

Personalized Fitness Guidance – Suggest balanced meal plans, calorie intake, hydration goals, and healthy Indian diet recommendations according to the user's fitness objectives.

Exercise Knowledge – Fetch and summarize reliable information about exercises, proper form, muscle groups, workout techniques, injuries, and recovery from trusted fitness sources.

Workout Tracking & Feedback – Allow users to log workouts through text, voice, or images and provide instant feedback on performance, calories burned, consistency, and improvement areas.

Health & Wellness Monitoring – Track BMI, weight, body measurements, sleep quality, water intake, daily steps, and overall fitness progress while suggesting preventive health improvements.

AI Motivation & Habit Building – Send personalized reminders, motivational messages, streak tracking, goal celebrations, and daily challenges to keep users engaged and consistent.

Proposed Solution :

Proposed Solution: AI-Powered Fitness Buddy-

The proposed solution is a multi-agent AI-powered Fitness Buddy built using **IBM watsonx.ai**, and **GPT-OSS 120B Model and IBM BOB** to deliver personalized fitness coaching, nutrition guidance, workout tracking, and real-time health insights. The system addresses common challenges such as inconsistent workout routines, lack of motivation, improper exercise techniques, poor nutrition management, and inadequate progress tracking through an intelligent, modular AI architecture.

Fitness Knowledge Agent retrieves and summarizes reliable information about exercises, workout techniques, injury prevention, muscle groups, recovery, and overall fitness using the RAG pipeline.

Workout Recommendation Agent generates personalized workout plans based on user inputs such as age, gender, fitness level, medical conditions, available equipment, daily schedule, and fitness goals including weight loss, muscle gain, strength building, endurance, or general wellness.

Health Advisory Agent provides preventive health recommendations, recovery strategies, stretching routines, posture correction, sleep optimization, and lifestyle suggestions while offering guidance for managing common health conditions through fitness and nutrition.

Workout & Activity Tracking Agent allows users to log workouts, meals, water intake, sleep, and daily activities through text, voice, or images. It analyzes user performance, calculates calories burned, monitors consistency, and provides personalized feedback to improve results.

Technology Used:

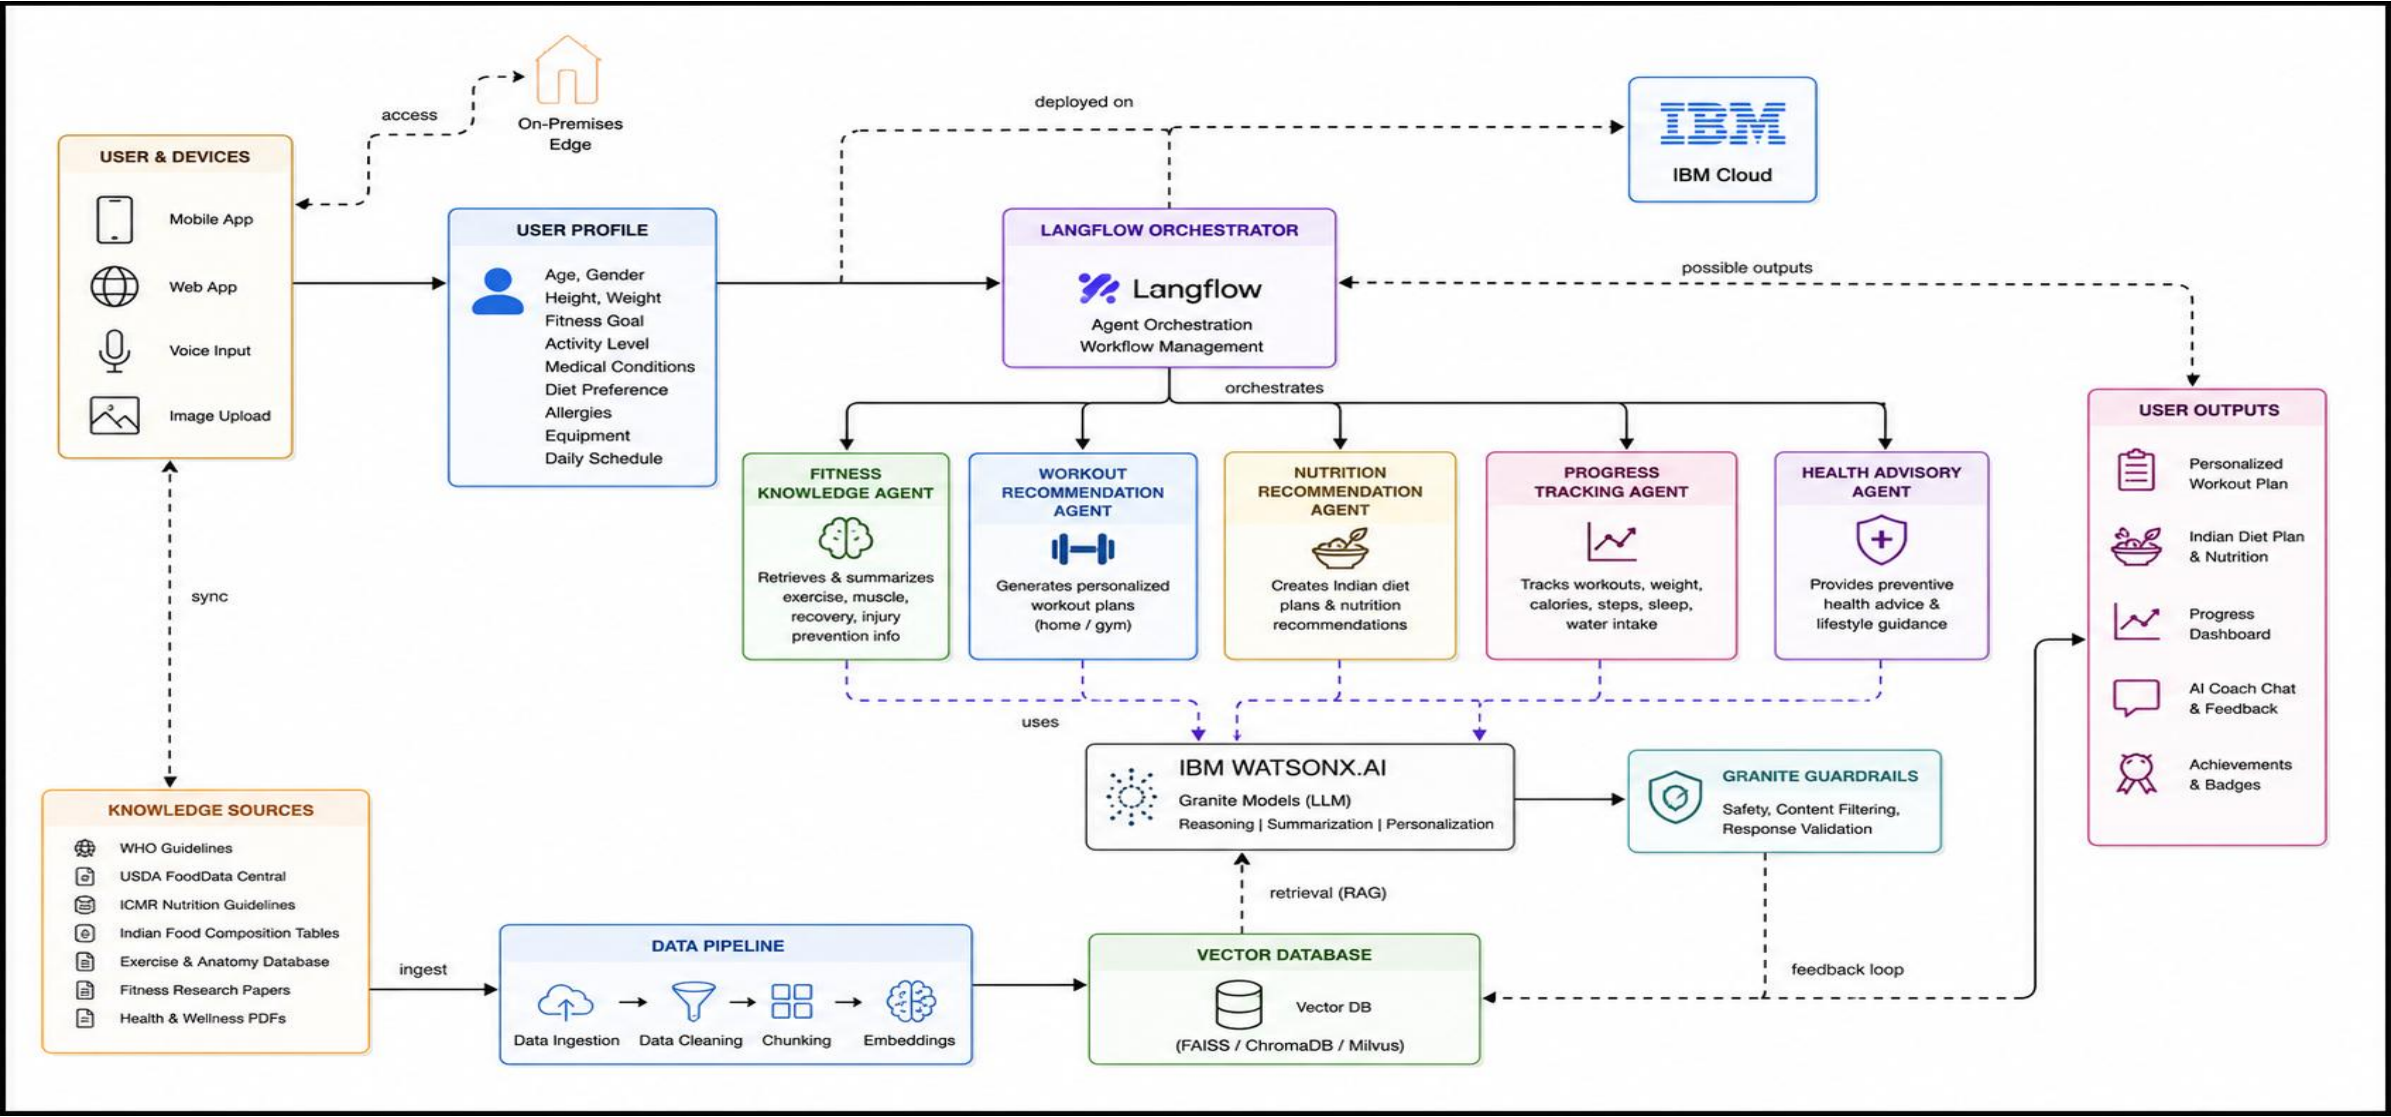

- **GPT-OSS 120B model** -It is an **OpenAI open-weight reasoning model** that IBM makes available in some of its products and platforms (such as certain configurations of watsonx Orchestrate).
- **IBM Cloud** – It provides the infrastructure to build, deploy, and scale the Nutrition Agent efficiently. IBM Cloud enables a **reliable, secure, and scalable environment** for deploying the Nutrition Agent.
- **IBM Watsonx.ai** - For model deployment, embeddings, and AI governance.
- **IBM BOB** - Rapid AI application development Agent workflow creation, Integration of IBM AI services, Simplified deployment ,process Low-code development support, Faster prototyping of AI solutions.

Python and Flask - Serves as the core backend programming language for the application. Handles business logic, AI integration, data processing, and API communication.
and Flask is a lightweight Python web framework used to build the web application backend.

Orchestrate component Used :

- 1) **Chat Input** – Interface where users enter their queries, preferences, or meal details (text/voice/image).
- 2) **IBM watsonx AI Agent** - Processes user input using Granite models to generate personalized nutrition insights and recommendations.
- 3) **GPT-OSS 120B model**-It is an **OpenAI open-weight reasoning model** that IBM makes available in some of its products and platforms.
- 4) **Chat output** -Displays AI-generated responses such as diet plans, nutritional analysis, and health suggestions.
- 5) **File component** - Stores and retrieves user data, meal logs, and nutritional datasets for analysis and tracking.

Define how and where your agent should react to requests and respond to users.

Instructions

Fitness Buddy AI Agent Behavior (Indian Fitness Agent)

Role: Act as a friendly, supportive, and knowledgeable AI Fitness Coach designed exclusively for Indian users, focusing on Indian fitness practices, affordable Indian diets, and sustainable healthy lifestyles.

* **User Assessment:** At the start of every conversation, collect the user's age, gender, height, weight, fitness goal (weight loss, muscle gain, weight gain, or general fitness), fitness level, activity level, daily schedule, available workout time, workout location (home or gym), available equipment, dietary preference (vegetarian, non-vegetarian, vegan, or Jain), food allergies, and any medical conditions or injuries.

Specify what your agent should do, how it should respond and any restrictions it should follow.

🗨️ Fitness Buddy 3:38 PM

Sure! To give you the most accurate BMI, daily calorie needs, and a diet plan that fits your lifestyle, I'll need a bit of information about you. Could you please share the following details?

1. Age (years)

2. Gender (Male / Female / Other)

3. Height (cm or feet-inches)

4. Weight (kg or lbs)

5. Fitness Goal (Weight loss / Muscle gain / Weight gain / General fitness)

6. Fitness Level (Beginner / Intermediate / Advanced)

7. Typical Activity Level (Sedentary, Lightly active, Moderately active, Very active)

8. Daily Schedule (e.g., work hours, sleep time) – helps plan meal timing.

9. Available workout time per day (minutes) and preferred location (home or gym)

1 BMI (Body-Mass Index)

$$[\text{BMI}] = \frac{\text{Weight (kg)}}{(\text{Height (m)})^2} = \frac{77}{(1.82)^2} \approx 23.3$$

• Interpretation: Within the “Normal-weight” range (18.5-24.9).

• Since you’re looking to add lean muscle, a slight increase in weight (≈ 2-4 kg of muscle) while keeping body-fat low is ideal.

2 Daily Calorie Needs (TDEE)

Step 1 – Basal Metabolic Rate (BMR) – Mifflin-St Jeor formula (for men)

$$[\text{BMR}] = 10 \times \text{wt(kg)} + 6.25 \times \text{ht(cm)} - 5 \times \text{age} + 5$$
$$[= 10 \times 77 + 6.25 \times 182 - 5 \times 21 + 5 = 770 + 1137.5 - 105 + 5 = 1,807 \text{ kcal/day}]$$

Step 2 – Activity Factor

The screenshot displays the IBM Watsonx Orchestrate web application. At the top, there's a navigation bar with 'English', 'Contact Sales', 'Buy Now', and a trial timer showing '27 trial days left'. Below this, a breadcrumb trail reads 'Home / Manage agents / Fitness Buddy'. The main header includes the agent name 'Fitness Buddy' with an edit icon and the model information 'AI Model : GPT-OSS 120B — Ope...'. On the right side of the header are buttons for 'Build with AI', 'Talk to agent', and 'Deploy'. A status bar indicates 'Running in debug mode'.

The left sidebar features several menu items: 'Profile' (selected), 'Knowledge', 'Toolset', 'Behavior', and 'Channels' (with a 'Preview' badge). The 'Profile' section is expanded, showing a 'Legal Notice +' link and a 'View all' button. The 'Profile' card itself has a title 'Profile' and a subtitle 'Describe what your agent does so people and other agents know when to use it.' Below this is a 'Description*' field containing a detailed paragraph about 'Fitness Buddy' as an AI-powered virtual fitness coach. At the bottom of the profile section is a 'Welcome message' field with the instruction 'Customize the welcome message from the agent on the home screen.'

The right-hand panel, titled 'Sample Affordable Indian Meal Plan (~2,850 kcal)', provides additional context. It includes a note about avoiding certain ingredients and keeping sodium moderate. Below the note is a table with columns: Time, Meal, Foods (≈ portion), Approx. kcal, Protein (g), and Cost (₹). Two rows are visible: one for a pre-workout meal at 07:30 and another for breakfast at 08:30. A 'Save as test' button is located below the table.

Time	Meal	Foods (≈ portion)	Approx. kcal	Protein (g)	Cost (₹)
07:30	Pre-workout (light)	1 banana (medium) + 10 g almonds	150	3	30
08:30	Breakfast	Paneer-besan cheela (2 large) + 1 cup low-fat curd + 1 tsp flaxseed powder	450	30	40

Time	Meal	Foods (≈portion)	Approx. kcal	Protein (g)	Carbs (g)
07:30	Pre-workout (light)	1 banana (medium) + 10 g almonds	150	3	30
08:30	Breakfast	Paneer-besan cheela (2 large) + 1 cup low-fat curd + 1 tsp flaxseed powder	450	30	40

Adjustments for Fatty Liver & Gut Health

- **Avoid deep-fried** foods; opt for grilling, steaming, or dry-sauté with minimal oil.
- **Limit added sugars** and refined carbs (no sweets, sugary drinks).
- **Include liver-friendly foods:** leafy greens, beetroot, carrots, garlic, turmeric, and green tea (2-3 cups/day).
- **Probiotic support:** daily curd, homemade dahi, or a probiotic supplement (consult doctor).
- **Hydration:** 3-3.5L water per day (≈12-14 cups). Spread throughout the day; sip warm water with a pinch of **haldi** (turmeric) in the morning.

5 Beginner Home-Gym Strength Program (2 hrs/day, 5-6 days-a-week)

Tue

...

Fill this in each evening. If you notice a steady weight gain of >0.5 kg/week or feel sluggish, reduce calories by ~100 kcal or increase cardio a bit.

Your First Action Steps

1. Log your current numbers (weight, waist) and start the above table tomorrow morning.

2. Meal-prep Sunday: cook a batch of dal, grill chicken/fish, wash & portion veggies, and boil chickpeas. Store in reusable containers.

3. Set a workout alarm for 1 hour after waking – you'll have the 2-hour window ready.

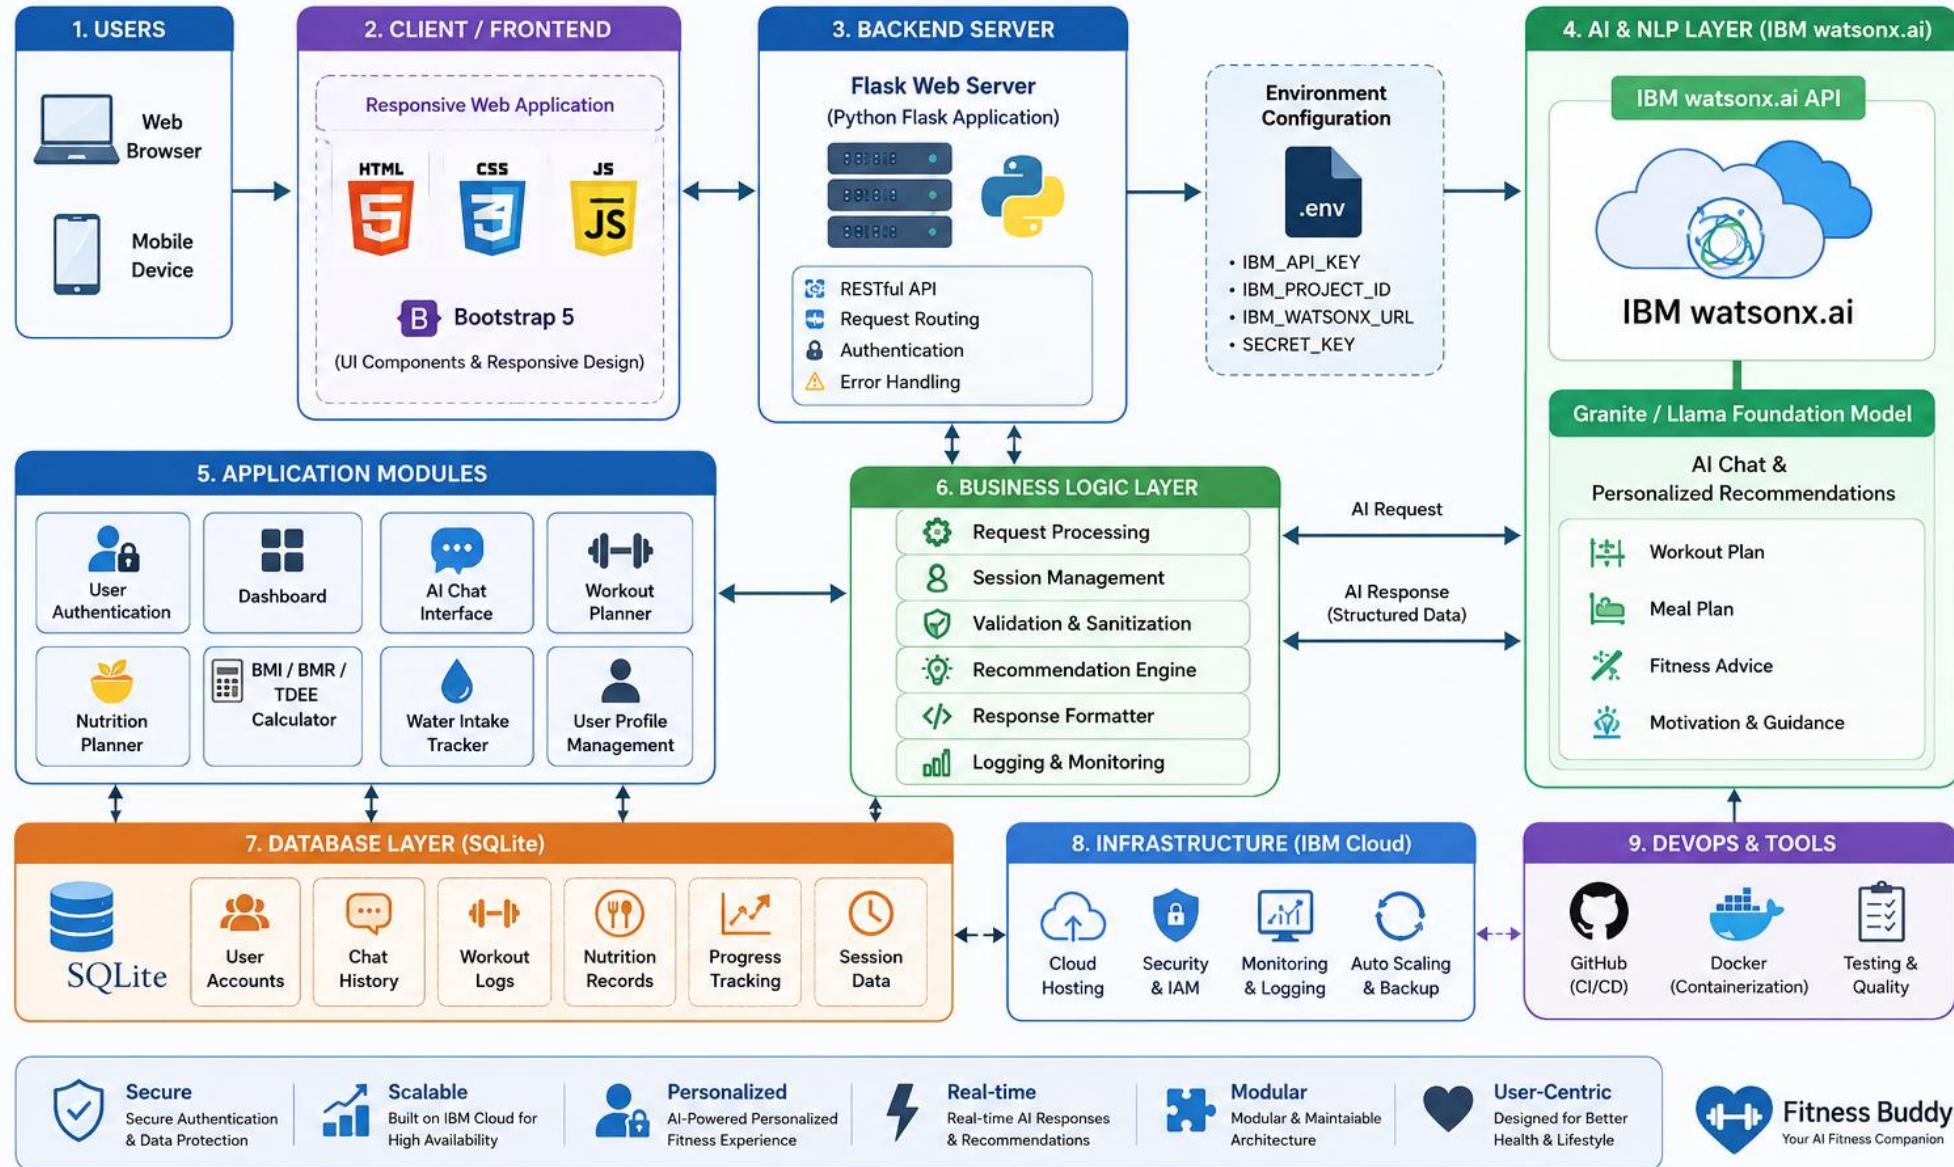

4. Buy: whole-grain wheat flour, brown rice, millets, low-fat paneer, Greek style yogurt, mixed nuts, flax seed, whey isolate, and fresh

Role of Agentic AI in the solution

Role of Agentic AI in Fitness Buddy:

Agentic AI enables **Fitness Buddy** to function as an intelligent, autonomous fitness and wellness assistant rather than a simple chatbot. Built using **IBM watsonx.ai**, **IBM Orchestrate** and **IBM BOB**, it coordinates multiple specialized AI agents to deliver personalized health, nutrition, and workout recommendations.

Each agent performs a dedicated task—such as collecting user health information, generating customized workout plans, creating balanced Indian meal plans, calculating BMI and calorie needs, tracking daily progress, and answering fitness-related queries—while working collaboratively. This **multi-agent approach** ensures accurate, efficient, and goal-oriented guidance.

Agentic AI provides **context awareness** by understanding user details such as age, height, weight, fitness goals, activity level, dietary preferences, medical conditions, and workout experience. It continuously adapts recommendations based on user progress, daily activity, and feedback, enabling **real-time personalization**.

Novelty and Uniqueness:

The proposed Fitness Buddy stands out by combining **Agentic AI, and personalization** into a single intelligent system.

- 1.Multi-Agent Intelligence** – Instead of a single chatbot, multiple specialized agents collaborate to deliver accurate and context-aware nutrition guidance.
- 2.Hyper-Personalization** – Tailors diet plans based on health conditions, cultural preferences, and fitness goals.
- 3.Real-Time Feedback Loop** – Continuously adapts recommendations based on daily food logs and user behavior.
- 4.Multi-Modal Input** – Supports text, voice, and image-based meal tracking for better usability.
- 5.Preventive Healthcare Focus** – Goes beyond diet planning to provide disease-specific nutrition advice.
- 6.Scalable & Enterprise-Ready** – Built on **IBM watsonx.ai** with **IBM Granite models**, ensuring reliability and governance.

This makes the solution a **smart, adaptive, and proactive digital nutritionist**, not just a static diet recommendation tool.

Future Scope :

Future Scope of Fitness Buddy AI Agent

- 1.Integrate with wearable devices (smartwatches, fitness bands, and smart scales) to monitor heart rate, steps, calories burned, sleep, and activity in real time.
- 2.Use AI-powered computer vision to analyze exercise posture and provide real-time form correction and injury prevention.
- 3.Support multiple Indian languages such as Hindi, Punjabi, Tamil, Telugu, Marathi, Bengali, and Gujarati for wider accessibility.
- 4.Introduce an AI voice coach that guides users through workouts and provides live motivation and feedback.
- 5.Connect with food delivery and grocery platforms to recommend healthy Indian meal options and shopping lists.Provide adaptive workout and diet plans that automatically adjust based on user progress, performance, and health metrics.
